ABOUT US

Ruispack is a leading global supplier based in Ningbo, China, specializing in premium packaging solutions for household chemicals, cosmetics, skincare, and health products. Our extensive range includes airless bottles, mist sprayers, trigger sprayers, foam pumps, treatment pumps, caps, lids, droppers, injection plastic bottles, cream jars, glass containers, cosmetic tubes, deodorant sticks, roll-ons, dispensers, makeup containers, and custom decorations.

With a commitment to considerate service, prompt delivery, superior quality, and flexible payment options, Ruispack earns the trust and loyalty of clients worldwide.

Our Mission and Values

Mission

Ruispack aims to help clients succeed in a competitive market by providing innovative and sustainable packaging solutions.

Core Values

- Constant innovation in design, materials, and functionalities.
- A dedicated team driven by a passion for beauty and cosmetics packaging.
- Premium packaging materials that meet high-quality standards.
- Strong partnerships with clients, fostering long-term relationships based on trust and mutual success.

Our Offered Services

COLOR MATCHING & DECORATIONS

To ensure color consistency and accuracy across pump heads, closures, and bottles, we utilize pantone color codes, though minor variations may occur due to differences in production processes, materials, and suppliers. we strive to maintain these within acceptable tolerances and provide light, middle, and dark color range boards for clients with strict requirements.

For enhanced visual appeal, our bottles and tubes offer various decorations including silk printing, matte finishing, soft touch, hot - stamping, gradient effects, labeling, embossing / debossing, and coating.

FLEXIBLE MATCHING FOR PUMPS AND BOTTLES

Our experienced team provides expert consultation and advice on selecting optimal pump and bottle combination tailored to customer requirements, leveraging a vast network of suppliers for diverse packaging items to deliver an exclusive look for your products.

We offer a reliable, efficient, and cost-effective one-stop solution, with flexible matching services that save time and effort while ensuring the final product meets your expectations.

Our Offered Services

SHORT PRODUCTION AND SAMPLING TIME

Bulk production generally takes 20 - 25 days, sampling takes 7 - 10 days.

READY TO SHIP FOR STOCKS

We understand the importance of quick and efficient product shipping, which is why we offer ready-to-ship services for select stock items, including regular glass bottles and jars, as well as standard airless bottles.

With low MOQs for stock goods and door-to-door shipping arrangements, we ensure a hassle-free delivery experience.

3D PRINTING AND MOCK UP

For products requiring mold development, we provide 3D samples to visualize and test the new product's design, size, and function prior to mass production, ultimately saving time and money by reducing the need for expensive and time-consuming mold revisions.

Our Offered Services

CUSTOMIZED MOLDING SERVICE

Our customized molding service delivers tailored manufacturing solutions for customers' unique product designs, backed by experienced engineers and technicians with expertise in product design and manufacturing, who provide comprehensive guidance and support from initial design through to final production.

QUALITY ASSURANCE

We take pride in our robust quality control system, which ensures consistent delivery of high-quality products through pre-production samples provided for customer confirmation before mass production.

During manufacturing, we implement in-process inspections, quality checks, and testing to verify proper production. Post-production, items undergo visual inspections to eliminate defects like scratches, dents, or discoloration, while cosmetic containers such as bottles and jars are tested for leak-proofing, child-resistance, and tamper-evidence to meet safety standards. All products are securely packed in standard export cartons, with glass items palletized to prevent transit damage.

Our Offered Services

SUSTAINABLE PACKAGING SOLUTIONS

Sustainable packaging solutions are increasingly vital as consumers and businesses strive to minimize environmental impact. Our specific offerings include biodegradable packaging made from natural renewable materials like corn starch, sugarcane, and wood that decompose in the environment; recyclable packaging from materials such as glass, metal, or up to 100% PCR plastic; and reusable packaging, including refillable bottles and jars, designed for multiple uses to reduce the demand for new materials.

And we offer clients with a complete range of high-end quality packaging containers and sustainable packing solutions for the global cosmetic & skincare brand market.
